Homework Formatting Reminders

1. Your solution should be neat and easy to follow.
2. **Number each problem.** If your homework has five parts, then your solution for each of these five parts should be clearly marked.
3. **Put problems in order.** Problem 1 should be presented before part 2, and so on. I will no longer grade homework assignments where the problems are out of order.
4. **Staple** your papers together.
5. **Include contour plots.** Be sure to show plots of your quantity of interest (VON, SX, SY, SZ, TXY, TXZ, TYZ, etc.). The contour plots should show your geometry with a legend.
6. **Label contour plots** - von Mises or VON, displacement in x or SX, total deflection or URES, . . .
7. **Be quantitative when comparing results.** Compute % differences between results when practical.
8. **Fold your paper and write your name on the outside** (below where the back side of the staple comes through the paper).
9. **Include your pledge statement** on the outside below your name.
